sustainable neighborhoods

Livable New York is a New York State initiative meant to help foster livable communities across the State. The name for this initiative, *Livable New York*, was provided by Patricia Baron Pollak, PhD, of Cornell University. *Liveable New York* was the original title of a closely related community evaluation manual/tool created by Dr. Pollak, and we appreciate her permission to use that title for the State's initiative. Future editions of Dr. Pollak's community evaluation manual, as well as any other related materials, will be published under the title *Liveable Communities—New York*.

Sustainable Communities
for all ages

Dear Colleagues,

We are pleased to make this *Livable New York Resource Manual* available to community leaders, residents, organizations, businesses, professionals, and officials in municipalities across New York State. The *Resource Manual* was developed under the State's *Livable New York* initiative, and is meant to serve as a source of information and technical assistance.

The manual includes 125 articles—each devoted to a successful or innovative model, approach, or strategy related to *Livable New York's* focus areas: housing, planning, zoning development, universal design for homes and the community, energy efficiency and alternatives, green building, mobility, and transportation.

New York's communities are changing significantly . . . due to the aging of the baby boomers; increasing longevity; the shifting proportional balance between the elderly and non-elderly populations; loss of specific population groups to other states; and the increasing diversity of our residents, which stems from our robust immigration and migration patterns, increasing numbers of people with disabilities, growth in the proportion of cultural and ethnic groups, and expanding numbers and types of non-traditional families and households.

The intent of *Livable New York* is to help communities in their efforts to respond to these social and demographic shifts and to help them create *livable* neighborhoods that reflect the diverse, evolving needs and preferences of *all* community residents. The *Resource Manual* is a tool to help municipalities achieve the goal of making New York the best place for *everyone* to live, work, grow up, and grow old.

We wish to acknowledge the many authors who wrote the articles for the *Resource Manual* and thank them for their excellent work in contributing to this valuable community resource.

The manual is intended to be a "living" document. Articles will continue to be updated, and new articles, as well as material for the Appendix, will continue to be added. Please send us any comments you may have about the manual; in addition, we will be pleased to consider any offers to contribute additional articles.

Sincerely,

A handwritten signature in black ink, appearing to read "Greg Olsen", is written over a light blue horizontal line.
